## **DETAILED ACTION**

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 36-39, 42-43, 46, 50-51, 53, and 55 are rejected under 35 U.S.C. 102(b) as being anticipated by Tachihara (US 5,481,287).

Tachihara discloses a method of ejecting fluid from a firing chamber, a fluid ejection device, and a resistor arrangement (Fig. 4A) for an inkjet printhead, the resistor arrangement comprising: 1) at least one inner resistor/driver/means (heating element 402) adapted to create a first drive bubble for ejecting a first drop of ink from the inkjet printhead (col 4, In 52-col 5, In 3), 2) at least one outer resistor/driver/means (heating elements 401 and 403) surrounding the inner resistor, the inner resistor and the outer resistor together being adapted to create a second drive bubble for ejecting a second drop of ink from the inkjet printhead, the inner resistor being adapted to create the first drive bubble independently of the outer resistor, the second drop on ink being larger than the first drop of ink (col 4, In 52-col 5, In3), wherein the inner resistor/driver and the outer resistor are electrically connected, 3) wherein the inner driver comprises an inner resistor (heating element 402) and the outer driver comprises an outer driver (heating elements 401 and 403), and 4) wherein the inner resistor and the outer resistor are electrically connected in parallel (col 5, Ins 4-9). The method of claims 50, 51 and 55 are disclosed in Tachihara. Tachihara inherently teaches wherein the inner resistor and Application/Control Number: 10/633,123 Page 3

Art Unit: 2853

the outer resistor are arranged such that the second drive bubble is generally centered over the inner resistor.

## Allowable Subject Matter

- 3. Claims 40, 44, 47, 52 and 54 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claim 41 will be allowed when claim 40 is rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claim 45 will be allowed when claim 44 is rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claim 48 will be allowed when claim 47 is rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 4. The following is a statement of reasons for the indication of allowable subject matter:

The limitation of wherein the outer driver is operably coupled with a barrier, further wherein the barrier covers the outer driver during creating of the first drive bubble. This invention solves the problem of providing better drop-volume control because the size of the chamber is adjusted to better fit the drop. It is this limitation, which is not taught or suggested in the prior art, which makes the claims allowable over the prior art.

The limitation of first and second switching devices, operably coupled with the inner and outer resistors for selecting the inner and outer resistors.

Application/Control Number: 10/633,123

Art Unit: 2853

The limitation of changing the size of the firing chamber depending on whether the first drive bubble or the second drive bubble is created. This invention solves the problem of providing better drop-volume control because the size of the chamber is adjusted to better fit the drop. It is this limitation, which is not taught or suggested in the prior art, which makes the claims allowable over the prior art.

The limitation of means for changing the size of a fluid ejection barrier depending on whether the first drive bubble of the second drive bubble is created. This invention solves the problem of providing better drop-volume control because the size of the chamber is adjusted to better fit the drop. It is this limitation, which is not taught or suggested in the prior art, which makes the claims allowable over the prior art.

- 5. Claim 49 is allowed.
- 6. The following is a statement of reasons for the indication of allowable subject matter:

The limitation of wherein at least one of the inner resistor and the outer resistor is electrically connected with a barrier formed of a shape change material. This invention solves the problem of providing better drop-volume control because the size of the chamber is adjusted to better fit the drop. It is this limitation, which is not taught or suggested in the prior art, which makes the claims allowable over the prior art.

## **Contact Information**

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Juanita D. Stephens whose telephone number is (571) 272-2153. The examiner can normally be reached on Flex.

Application/Control Number: 10/633,123 Page 5

Art Unit: 2853

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Meier can be reached on (571) 272-2149.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
